► L'analyse de données météorologiques permet de suivre le déplacement des perturbations ainsi que les **pressions atmosphériques** dans le temps et de mieux comprendre les mouvements horizontaux, ou vents, au contact du sol.

► Les lignes isobares rejoignent des points d'égale pression atmosphérique. Une zone de basse pression dans la troposphère est une dépression où sont localisés des courants verticaux ascendants. Une zone de haute pression est un anticyclone où sont localisés des courants verticaux descendants.
